

What is claimed is:

1. A light and portable adhesive tape cutter comprising a gathering section having a fixed cutter seat and a sliding cutter seat at two ends thereof, wherein the fixed cutter seat and the sliding cutter seat
5 are provided with sawteeth at edges of a same side thereof, such that the sliding cutter seat is capable of sliding movements to become mounted on the fixed cutter seat.
2. The light and portable adhesive tape cutter in accordance with claim 1, wherein the gathering section is a formed integral strip having
10 elasticity.
3. The light and portable adhesive tape cutter in accordance with claim 1, comprising two gathering sections each having one end thereof provided with an attaching strip for joining with each other to form one body.
- 15 4. The light and portable adhesive tape cutter in accordance with claim 1, comprising two gathering sections each having one end thereof provided with an attaching strip, and the other end thereof devised with a fixed cutter seat and a sliding cutter seat; wherein, the fixed cutter seat and the sliding cutter seat have sawteeth at side edges
20 thereof; the fixed cutter seat has a sliding groove further having a

row of tooth members at a side thereof; and the sliding cutter seat has a downwardly extended column, a locating block that can be moved upward and downward at an end surface thereof, a sawtooth at a side edge thereof, and a locating clamp at a lower portion thereof.

5

5. A light and portable adhesive tape cutter being a simple cutter seat as a formed integral made of a plastic material with elasticity; and having a bent gathering section at a lower portion thereof, and a sawtooth at an upper edge thereof.
